Sameer Karjatkar

(Tel : +919620347182)

I am an Unreal Engine Developer , have worked on versions 5.X . I started working on Unreal Engine in 2022 and since then have been involved in developing plugins . Prior to that I have been mostly been working as a backend developer in the 3D Visualization and graphics domain . My very recent exposure has been on XR/VR domain which I feel is a natural extension of the Visualization domain

Certifications & University Graduations

Bachelors of Computer Science (University of Pune,India)

Masters of Computer Management (University of Pune,India)

COMPETENCIES

Operating System: Windows 10/11, Linux

Programming Languages: C, C++ 11, VC++ 17.0, Python 2.7.8

Game Engines: Unreal Engine

Versions: 5.X

UE Frameworks Chaos, OpenXR, UMG

Graphics Framework DirectX 11 & 12

Tools: Git, Perforce, Jira , Jenkins, NSIS, Unreal Insights

Areas of Interest: Computer Graphics

Professional Experience

Experience 23.0 years

Mail : sameerkarjatkar@gmail.com

LightFury Games : Feb 2026 –

Role: Engine Programmer

Game: E-Cricket(Mobile)

Product : Unreal Engine 5.5(Custom)

Technology : C++ 17.0 ,Blueprints

As a Engine Programmer, developed tools using Unreal Insights to identify Performance bottle necks in Game Play or Render Thread.

Developed a Tool which fetches the data from GameBench and creates a report and distributes for performance analysis

Using Unreal Chunk Strategy brought down the size of the game under 200 MB to enable distribution on google playstore

Implemented a secure Cookie Exchange tool for downloading assets using CDN workflow

Holo-Light: July 2024 – Oct 2025(Germany)

Role : Unreal Engine Developer

Project: Stream Plugin

Product : Unreal Engine 5.4/5.5

Technology : C++ 17.0 ,Blueprints

The purpose of this plugin is to hook onto the Unreal Engine Render Pipeline and extract the frame and submit it to the upstream libraries . The frame is then consumed by Stream clients on the VR/XR devices . Features implemented

- a) Head Pose**
- b) Hands and Input Interaction**
- c) DirectX 11 & 12**
- d) Depth Buffer**
- e) Passthru support**

Mail : sameerkarjatkar@gmail.com

Ethosh : Feb 2023 – Nov 2023 (Pune)

Role: Consultant

Project: SoftBody Interaction

Product : Unreal Engine 5.3

Technology : C++ 17.0 , Blueprints

Using Unreal Engine Chaos framework we created a prototype where a user could interact with a softbody using a mouse . The intent is to allow a medical surgeon to interact with a soft tissue .

Project: GLTFCustomPlugin

Product : Unreal Engine 5.1.1

Technology : C++ 17.0

The purpose of this plugin is to extend the capabilities of the existing GLTF/GLB importer/Exporter . The current Interchange Pipeline importer does not support the import of draco compressed glb file into UE . Custom Property set in Blender are not imported into UE . Automatic creation of Blueprints from the assets imported is not supported .

We created a new Plugin which was a clone of the existing glb/gltf importer which now supports

- **Import Draco Compressed GLB files into UE 5.1.1**
- **Integrated googles draco library into UE plugin modules**
- **Support Import/Export of MetaData(CustomProperties) into UE**
- **Automatic creation of Blueprint for the Assets Imported**
- **Map the tree hierarchy and nomenclature of the objects with that of blender**
- **Animation ,Materials sync**
- **Export of the BluePrint node to a GLB/GLTF file**

Mail : sameerkarjatkar@gmail.com

PlanEYE: Sept 2022 – Sep 2023 (Remote: South Korea)

Role : Unreal Engine Developer

Project: AssetImporer

Product: UnrealEngine 5.0.3

Technology : C++ 17.0

Developed a Toolbar plugin for Unreal Engine 5.0.3 .

This Plugin allows the user to View/select the assets he wishes to use in Unreal Engine before he actually imports .

The plugin supports import of FBX,OBJ GLM/GLB assets, textures,Materials,Meshes . For GLB/GLM the plugin uses the DataSmith Importer library . The plugin uses the SLATE framework to build the UX .

Project: CustomMultiUserEditor

Role : Unreal Engine Developer

Project: CustomMultiUserEditor

Product: UnrealEngine 5.1.1

Technology : C++ 17.0

Developed a Toolbar plugin for Unreal Engine 5.1.1 .

This Plugin automates the setup required for a MultiUserEditor plugin .

The plugin will Launch a Concert Server, create a session and auto join the session .

The plugin also supports Level Change sync which the existing MultiUserEditor does not support

Dassault Systemes : July 2008 – Oct 2022(India)

Role : Senior Technical

LeadProduct : Deltagen

Domain : Visualization

Technology : C++ 11.0 / Python 2.7.8

- 3DEXCITE DELTAGEN is the world's leading high-performance software that delivers a highly-realistic display of 3D visualizations with real-time interaction. Data from all professional CAD systems is instantly brought to life in real-time and in outstanding visual quality, supporting the full value chain from design and engineering to marketing and sales.
- As a Technical Lead , I was responsible for low level design , code reviews and implementing Agile methodologies like grooming stories ,epic creation

Product : Delmia Process Engineer

Domain : Process Planning

- The Process Planning and Analysis enables the user to define and analyze the process from a functional perspective. The PPR Navigator™ for Manufacturing is used for structuring and visualization of all the relevant planning data. It has an intuitive interface providing access to the information organized by Product, Process and Resource
- Actively developed and maintained modules for the backend server COM / DCOM components

HCL Technologies : Sept 2006 – July 2008

Senior Software Engineer

Product : CPORT

Domain : Investment Banking

Technology : C++/Perl / Sybase

- CPORT is a margining reporting product for derivatives market
- I was involved in developing perl scripts to process margin numbers for Funds and also generating reports for Fund managers

Mail : sameerkarjatkar@gmail.com

Mphasis Software Sevices Ltd: Nov 2004 to Aug 2006 (India)

Role : Senior Software Engineer

Product : Regional Front End System

Domain : Middleware

Technology : C++, Unix, Oracle

- Regional Front End System acts as light weight switch which translates messages from customer transaction scripts which acts as query to the backend database
- I was involved in the backend development and maintenance of the product

CMC : Nov 2003 - Nov 2004 (India)

Role : Senior Software Engineer

Product : Central Depository Accounting System(CDAS)

Domain : Equities

Technology : pro C, Unix, Oracle

- CDAS is a demat trading software which allows the Depository participants to register their trade contracts with the Bombay Stock exchange
- I was working on the backend server which creates the queries from the client requests and executes them on the back end database

Mail : sameerkarjatkar@gmail.com

Interface Embedded Systems : Jan 2002 -Oct 2003(India)

Role : Software Engineer

Product : Intelligent Lighting System

Domain : Embedded

Technology : C, Unix

- Intelligent Lighting system controls the platform lights based on the frequency of the trains that arrive on the platform
- I was involved in the development of the module which interacts with the serial port and sets the bits on the hardware port which triggers an on/off signal to the electrical levers
